## Alert Detail

Wysoki	External Redirect
Opis	Redirectory adresów URL reprezentują typowo funkcjonalnie wykorzystywane przez strony internetowe do przekazywania przychodzących do alternatywnego zasobu. Można tego dokonać z różnych powodów i często robi się to w celu umożliwienia przenoszenia zasobów w strukturze katalogów i uniknięcia awarii funkcjonalności dla użytkowników, którzy zadają zasobu w jego poprzedniej lokalizacji. Przekierowania adresów URL można również wykorzystać do zaimplementowania równoważenia obciążenia, wykorzystania skrótów URL lub nagrywania poczty wychodzących. Jest to ostatnia implementacja, która jest często używana w atakach phishingowych, jak opisano w poniższym przykładzie. Redirectory adresów URL niekoniecznie stanowią bezpośrednią lukę w zabezpieczeniach, ale mogą być nadużywane przez intruzów próbujących przekonać ofiarę poprzez inżynierię społeczną, odwiedzając witryny, na których w rzeczywistości.

**Remote OS Command Injection**

Opis	Attack technique used for unauthorized execution of operating system commands. This attack is possible when an application accepts untrusted input to build operating system commands in an insecure manner involving improper data sanitization, and/or improper calling of external programs.

	<p>Jeli to moliwe, uij wywoa bibliotek, a nie procesów zewntrznch, aby odtworzy podan funkcjonalno.</p> <p>Uruchom swój kod w rodowisku "wizienia" lub podobnym rodowisku piaskownicy, które wymusza cise granice midzy procesem a systemem operacyjnym. Moe to skutecznie ograniczy, które pliki mog by dostpne w okrelonym katalogu lub które polecenia mog by wykonywane przez twoje oprogramowanie.</p> <p>Przykady poziomu OS obejmujce Unix chroot jail, AppArmor, and SELinux. Na zasadach ogólnych, zarzdzany kod moe zapewni pewn ochron. Na przykad,, java.io.FilePermission w Menaderze Ochrony Javy umoliwia ci sprecyzowa ograniczenia odnonie operacji na plikach.</p> <p>To moe nie by wykonalne rozwizanie i ogranicza wpyw tylko na system operacyjny; reszta aplikacji moe wci by podatna na zagroenie.</p> <p>W przypadku danych, które zostan uyte do wygenerowania polecenia do wykonania, naley zachowa jak najwiecej danych poza kontrol zewntrzn. Na przykad w aplikacjach</p>

## Solution

internetowych moe to wymaga przechowywania polecenia lokalnie w stanie sesji zamiast wysyania go do klienta w ukrytym polu formularza.

Uywaj sprawdzonej biblioteki lub struktury, które nie pozwalaj na wystpienie tego osabienia lub wprowadzaj konstrukcje, które sprawiaj, e to osabienie jest atwiejsze do uniknicia.

Na przykad we pod uwag uywanie kodowania kontrolnego ESAPI lub podobnych narzdz, bibliotek lub struktur. Pomog one programicie kodowa wyjcia w sposób mniej podatny na bdy.

Jeli chcesz uywa generowanych dynamicznie cigów lub polece zapytania, pomimo ryzyka, poprawnie cytuj argumenty i unikaj znaków specjalnych w obrbie tych argumentów. The most conservative approach is to escape or filter all characters that do not pass an extremely strict allow list (such as everything that is not alphanumeric or white space). Jeli kilka specjalnych znaków jest potrzebnych, takie jak znak kontrolny, opakuj kady argumenty w cytatach zaraz po kroku unikania/filtrowania. Uwaaj na wstrzykniecie argumentu.

Jeli program do wykonania pozwala na podanie argumentów w pliku wejciowym lub ze standardowego wejcia, naley rozway uycie tego trybu do przekazania argumentów zamiast wiersza polece.

Jeli moliwe, uywaj wymodelowane mechanizmy automatycznie wymuszajce oddzielenie danych i kodu. Te mechanizmy mog by w stanie zapewni odpowiednie cytowanie, kodowanie i sprawdzanie poprawnoci automatycznie, zamiast polega na programistach, aby zapewni t moliwo w kadym punkcie, w którym generowane s dane wyjciowe.

Niektóre jzyki oferuj wiele funkcji, których mona uy do wywoywania polece. Jeli jest to moliwe, naley zidentyfikowa dowoln funkcj, która wywouje powok polece za pomoc pojedynczego cigu znaków i zastpi j funkcj wymagajc indywidualnych argumentów. Te funkcje zazwyczaj wykonuj odpowiednie cytowanie i filtrowanie argumentów. Na przykad w C funkcja system() akceptuje acuch zawierajcy cae polecenie do wykonania, podczas gdy execl(), execve() i inne wymagaj tablicy acuchów, po jednym dla kadego argumentu. W systemie Windows CreateProcess() przyjmuje tylko jedno polecenie naraz. W Perlu, jeli polecenie system() jest zasilone tablic argumentów, wówczas wywoa kady z argumentów.

Zakadaj, e wszystkie dane wejciowe s szkodliwe. Use an "accept known good" input validation strategy, i.e., use an allow list of acceptable inputs that strictly conform to specifications. Odrzucaj wszystkie dane wejciowe, które nie s cile dopasowane ze specyfikacjami lub przeobra je w takie, które s dopasowane. Do not rely exclusively on looking for malicious or malformed inputs (i.e., do not rely on a deny list). However, deny lists can be useful for detecting potential attacks or determining which inputs are so malformed that they should be rejected outright.

Kiedy przeprowadzasz weryfikacj danych wejciowych, bierz pod uwag wszystkie potencjalnie wane waciwoci, wczajc dugo, peny zasig akceptowalnych wartoci, brakujcych lub dodatkowych danych wejciowych, zgodnie poprzez wane pola i dostosowanie si do zasad sprawy. As an example of business rule logic, "boat" may be syntactically valid because it only contains alphanumeric characters, but it is not valid if you are expecting colors such as "red" or "blue."

When constructing OS command strings, use stringent allow lists that limit the character set based on the expected value of the parameter in the request. To bezporednio ograniczy zakres ataku, jednake ta technika jest mniej wana ni poprawne kodowanie i unikanie danych wyjciowych.

Zauwa, e odpowiednie kodowanie wyjciowe, unikanie i cytowanie jest najskuteczniejszym rozwizaniem zapobiegajcym iniekcji polece systemu operacyjnego, chocia sprawdzanie poprawnoci danych wejciowych moe zapewni pewn obron. Dzieje si tak, poniewa skutecznie ogranicza to, co pojawi si w danych wyjciowych. Sprawdzanie poprawnoci danych wejciowych nie zawsze zapobiega iniekcji polece systemu operacyjnego, szczególnie jeli wymagane jest obsugiwanie dowolnych pól tekstowych, które mog zawiera dowolne znaki. Na przykad podczas wywoywania programu pocztowego moe by konieczne zezwolenie, aby pole tematu zawierao inaczej - niebezpieczne dane wejciowe, takie jak ";" oraz znaki ">", które powinny zosta usunite lub w inny sposób obsugiwane. Na przykad podczas wywoywania programu pocztowego moe by konieczne zezwolenie, aby pole tematu zawierao inaczej - niebezpieczne dane wejciowe, takie jak ";" oraz znaki ">", które

	<p>powinny zosta usunite lub w inny sposób obsugiwane. Moe to wydawa si drobn niedogodnoci, ale moe by waniejsze, gdy program opiera si na dobrze uporzdkowanych liniach tematycznych, aby przekazywa wiadomoci do innych komponentów.</p> <p>Nawet jeli popenisz bd podczas sprawdzania poprawnoci (np. zapomnisz jednego ze 100 pól wejciowych), odpowiednie kodowanie prawdopodobnie ochroni Ci przed atakami opartymi na wstrzykiwaniu. Tak dugo, jak nie jest to robione w odizolowaniu, walidacja danych wejciowych jest wci uyteczn technik, poniewa moe znacznie zmniejszy powierzchnie ataku, umoliwi wykrycie niektórych ataków i zapewni inne korzyści bezpieczeŃstwa, których waciwe kodowanie nie rozwizuje.</p>

redni	Content Security Policy (CSP) Header Not Set
Opis	Content Security Policy (CSP) is an added layer of security that helps to detect and mitigate certain types of attacks, including Cross Site Scripting (XSS) and data injection attacks. These attacks are used for everything from data theft to site defacement or distribution of malware. CSP provides a set of standard HTTP headers that allow website owners to declare approved sources of content that browsers should be allowed to load on that page — covered types are JavaScript, CSS, HTML frames, fonts, images and embeddable objects such as Java applets, ActiveX, audio and video files.

<b>redni</b>	<b>Missing Anti-clickjacking Header</b>
Opis	The response does not include either Content-Security-Policy with 'frame-ancestors' directive or X-Frame-Options to protect against 'ClickJacking' attacks.

Solution	<p>Modern Web browsers support the Content-Security-Policy and X-Frame-Options HTTP headers. Ensure one of them is set on all web pages returned by your site/app.</p> <p>If you expect the page to be framed only by pages on your server (e.g. it's part of a FRAMESET) then you'll want to use SAMEORIGIN, otherwise if you never expect the page to be framed, you should use DENY. Alternatively consider implementing Content Security Policy's "frame-ancestors" directive.</p>
